

SDK Interaction Flow

API Interactions

Payment Checkout Details API

This API will be used to get payment checkout details based on provided merchant key ,order token & order ID. This API provides the SDK with configuration details like supported payment methods, theme, customer details, merchant theme and order details etc.

```
1 Request Header:
2 Authorization: Bearer <order_token>
3 Content-Type: application/json
4 channel: <android>
5 sdkVersion: <1.0.0>
6 xHash: <SHA512>
7
8 Request Body:
9 {
10     "merchantKey": "xyz",
11     "orderId": "order123"
12 }
13
14 Response Body:
15 {
16     "orderId": "order_xyz123",
17     "amount": 150000,
18     "merchant": {
19         "name": "Xyz Merchant",
20         "logoUrl": "https://merchant.in/logo.png",
21         "themeColor": "#0075FF",
22         "language": "en",
23     },
24     "customer": {
25         "custName" : "ABC",
26         "custMsisdn" : "9988998899",
27         "custType" : "CUS",
28     },
29     "paymentOptions" : {
30         "NETBANKING" : {
31             "title" : "D",
32             "authModes" : [ ],
33             "redirectUrl" :
34 "https://app.airtelbank.com:5055/bank/api/v1/payments/pg-redirect/DEFAULT/550903139790071",
35             "callbackUrl" :
36 "https://ecom.airtelbank.com/payment/api/v1/pg-adapter/pgTransaction/callback/web",
37             "subOptionList" : [ {
38                 "code" : "UTIB",
39                 "name" : "Axis Bank"}]
40         },
41         "DEBITCARD" : {
42             "title" : "DC",

51             "subOptionList" : [ ],
52             "fetchSavedCard" : false
53         }
54     },
55 }
```

```

49     "paymentOptionsOrder" : [ "NETBANKING", "DEBITCARD" ],
50
51     "otherDetails": {
52         "key1": "value1",
53         "key2": "value2"
54     },
55     "orderExpirySeconds": 900
56 }
57
58

```

Fetch Charges API

This API will be used to fetch charges based on customer payment method selection & input. This API provides the SDK with charges details like fee & taxes.

```

1  Request Header:
2  Authorization: Bearer <order_token>
3  Content-Type: application/json
4  channel: <android>
5  sdkVersion: <1.0.0>
6  xHash: <SHA512>
7
8  Request Body:
9  {
10     "orderId": "order123",
11     "paymentOption": "CREDITCARD"
12     "binNumber": "123456"
13 }
14
15 Response Body:
16 {
17     "orderAmount" : "150",
18     "feeAmount" : "3.27",
19     "totalAmount" : "153.27",
20     "currency" : "INR",
21     "payMethod" : "CREDIT_CARD",
22     "cardNetwork" : "RUPAY",
23     "lable" : "Total Amount",
24     "description" : "convenience fee of ₹3.27 will be levied for
transaction made via credit card",
25     "feeDetails" : [ {
26         "feeApplicableOn" : "ORDER_AMOUNT",
27         "baseAmount" : "150",
28         "feeAmount" : "3.27",
29         "feeRate" : "2.18",
30         "feeType" : "SERVICE_CHARGE",
31         "rateType" : "PERCENT",
32         "lable" : "Convenience Fee (GST Inclusive)",
33         "order" : 1
34     } ]
35 }
36
37

```

Validate VPA API

This API will be used to validate VPA provided by customer. This API provides the SDK with VPA validation status.

```

1  Request Header:

```

```

2 Authorization: Bearer <order_token>
3 Content-Type: application/json
4 channel: <android>
5 sdkVersion: <1.0.0>
6 xHash: <SHA512>
7
8 Request Body:
9 {
10   "customerVpa" : "8597914397@ybl",
11   "orderId" : "550903130658866"
12 }
13
14 Response Body:
15 {
16   "ValidationStatus" : "Success/Failed"
17 }
18
19

```

Fetch saved card API

This API will be used to fetch saved card based on provided orderToken.

```

1 Request Header:
2 Authorization: Bearer <order_token>
3 Content-Type: application/json
4 channel: <android>
5 sdkVersion: <1.0.0>
6 xHash: <SHA512>
7
8 Request Body:
9 {
10   "orderId" : "550903130658866"
11 }
12
13 Response Body:
14 {
15   "cards":[
16     {
17       "cardId": "xyz",
18       "type": "credit"
19       "network": "VISA",
20       "issuer": "Airtel"
21       "expiryFlag": false,
22       "seqNo": "1"
23       "image": "https://image.in/visa.png"
24     }
25   ]
26 }
27
28

```

BIN Validation Details API

This API will be used to validate card bin number. This API provides the SDK with bin details like network, card type & bank name.

```

1 Request Header:
2 Authorization: Bearer <order_token>
3 Content-Type: application/json
4 channel: <android>
5 sdkVersion: <1.0.0>
6 xHash: <SHA512>

```

```

7
8 Request Body:
9 {
10     "orderId" : "550903130658866",
11     "binNumber": "123456"
12 }
13
14 Response Body:
15 {
16     "network": "VISA",
17     "issuer": "Airtel"
18     "image": "https://image.in/visa.png"
19 }
20
21

```

Initiate Payment API

API is used by the SDK to start a payment based on the customer's selected method (card, UPI, netbanking, etc.). It accepts payment inputs and returns the next required action — such as a redirect URL, UPI deeplink, or OTP trigger — to complete the transaction.

```

1 Request Header:
2 Authorization: Bearer <order_token>
3 Content-Type: application/json
4 channel: <android>
5 sdkVersion: <1.0.0>
6 xHash: <SHA512>
7
8 Request Body:
9 {
10     "orderId": "order_xyz123",
11     "method": "card", // or "upi_intent", "upi_collect", "netbanking"
12     "card": {
13         "number": "512345XXXXXX2345",
14         "expiryMonth": "09",
15         "expiryYear": "27",
16         "cvv": "123",
17         "name": "A B C"
18     },
19     "upi": {
20         "vpa": "9090909000@airtel",
21         "app": "google_pay" // Optional: only for UPI intent
22     },
23     "netbanking": {
24         "bankCode": "HDFC"
25     }
26 }
27
28
29 Response Body:
30 {
31     "paymentId": "pay_abc123",
32     "orderId": "order_xyz123",
33     "status": "pending", // or "success", "failed"
34     "method": "upi_intent",
35     "amount": 1000,
36     "currency": "INR",
37     "nextAction": {
38         "type": "deeplink", // can be: redirect, deeplink, send_otp
39         "url": "upi://pay?
pa=9090909000@airtel&pn=merchant&am=1000&cu=INR",
40         "note": "Open UPI app to complete the payment",
41         "enableResend": 30 //Enable resend button after 30 seconds,
42         "sendOtpToken": "1234567890abcd"
43     },
44     "expiresIn": 300, // in seconds

```

```
45 }
46
47
48
```

Resend & Validate OTP API

API handles both OTP validation and resend actions based on the **"action"** parameter. It facilitates secure customer verification by sending OTPs or verifying entered OTPs, guiding the SDK on the next steps.

```
1 Request Header:
2 Authorization: Bearer <order_token>
3 Content-Type: application/json
4 channel: <android>
5 sdkVersion: <1.0.0>
6 xHash: <SHA512>
7
8 Request Body:
9 {
10   "paymentId": "pay_abc123",
11   "sendOtpToken": "1234567890abcd",
12   "otp": "123456",
13   "action": "resend/otp_submit"
14 }
15
16
17 Response Body:
18 {
19   "paymentId": "pay_abc123",
20   "status": "verified",
21   "message": "OTP verified successfully"
22 }
23
```

Payment Status Enquiry API

API allows SDKs to query the current status of a payment using the **orderId**. It returns the payment status, payment details, and a merchant callback URL which should invoke in case of web/redirection integration.

```
1 Request Header:
2 Authorization: Bearer <order_token>
3 Content-Type: application/json
4 channel: <android>
5 sdkVersion: <1.0.0>
6 xHash: <SHA512>
7
8 Request Body:
9 {
10   "orderId": "order_xyz123"
11 }
12
13
14 Response Body:
15 {
16   "orderId": "order_xyz123",
17   "amount" : 10.0,
18   "paymentId" : "PH509031454800205",
19   "paymentTime" : "2025-09-03 14:15:49.954+0530",
20   "callbackURL" : "https://merchant.com/callbackUrl",
21   "callbackType" : "POST",
22   "callbackRequest": {
23     "key1": "value1",
24     "key2": "value2"
25   }
26 }
```

```
26     "callbackTime" : "2" //Redirect after 2 seconds
27   }
28 }
```
